

1                   **ABSTRACT**

2                   Subject matter includes an extensible information system, such as an  
3 exemplary content management system, and related methods for classifying,  
4 prioritizing, and localizing resources and associated content elements. The subject  
5 matter allows content to be described, classified, prioritized, and localized with  
6 increased flexibility and extensibility over conventional techniques without having  
7 to change a data structure of an exemplary content management system hosting the  
8 subject matter.
